

REDCap Background

- REDCap was developed by an informatics core at Vanderbilt University
- A free, secure, web-based application designed to support data capture for research studies
- Facilitates informatics support for clinical researchers
- Collaborative network of institutional researchers who share and support REDCap as a common research tool
- REDCap is available at no charge to institutional partners

VANDERBILT UNIVERSITY

Build online surveys and databases quickly and securely

- Create and design your project with form-based tools instead of table based
- No software download/installation is required
- Project data entry forms can be accessed from any device that supports internet browsing
- Conception to production-level survey/database in less than one day

A A

REDCap Features

Different project types according to your needs

- Two types of instruments are available, surveys and data collection sheets
- A project can have only surveys, only data collection sheets or a combination of both
- · Instruments can be used longitudinally for follow up or once off

Intuitive interface

- Project design with easy to use tools and intuitive visual interface
- Faster data entry by using text boxes, radio buttons, tickboxes, dropdown lists and visual analog scales

Export data to common data analysis packages

REDCap uses CSV format for exporting, which is supported by most statistical and database applications

Ad Hoc Reporting

- Create custom queries for generating reports to view or download
 - Specific records for patient management
 - De-identified bulk data for research
- Graphical Data View automatically visualizes data for inspection or reporting
 Counterfrequency: LIS Excel (2, 18,2%). MS Access (4, 35,4%). Bought Program (1, 9,1%). Custom Designed Software (3, 19,1%).

REDCap Features Confidential

Save your data collection instruments as a PDF to print

Generate a PDF version of your • forms and surveys for printing to collect data offline

use

Describe the 'other' habit and state how frequently How long has the patient been smoking? (Years)

How many cigarettes does the patient smoke per day?

How long did the patient smoke before guitting? (Years)

How many cloarettes did the patient smoke per day before guitting?

When did the patient stop smoking?

Time abstained from smoking (months)

How many units of alcohol does the patient use per week? (1 unit = 1 beer, 1 standard glass of wine, 1 shot (30ml) of spirits)

Co-Morbidities

It is used

Habits (Tick all that apply)

Describe 'Other' Co-Morbidity

Do you want to add another co-morbidity?

Hepatic Impairment theumatoid Condition

I Yes

None Diabetes Cardiovascular Hypertension Renal Impairment

MEMORAL Deutining and ID.

Easily manage a contact list of survey respondents or create a simple survey link

- Build a list of email contacts
- Create custom email invitations
- Track who responds
- Create a single survey link to email out or post on a website.

Send files to others securely

- Using 'Send-It', upload and send files to multiple recipients:
 - Project documents that are too large for email attachments
 - Documents that contain sensitive data

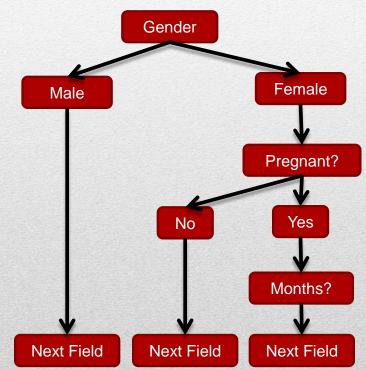

Advanced features

- Branching/skip logic Fields only become available as certain conditions are met
- Auto-validation and Data Quality rules

 Data can

 be validated as it is entered
- Calculated fields Calculate age from date of birth or BMI from height and weight, including conditional logic (if/then/else)
- File uploading Data capturers can upload documents to be stored in the record, like pathology reports or radiology results

User accounts and Access control

- Each researcher/data capturer has own account
- Other users cannot access projects that you create and records that you store
- You can give another user permission to access your project, and decide whether he can
 - View or modify fields in project design
 - Enter or change data
 - View/download identified or de-identified data
- Faculty administrator has access to all accounts, able to assist with troubleshooting, project design, report building, integration with existing databases

Audit Trail

- Log of which users access a project
- Detailed record of actions taken by user
- History of field values before each change was made

Security

- The Wits REDCap server is located on Main Campus, in a secure server room
- Physical access to the server is controlled
- Network access is secured by firewall and encryption of all data traffic
- Data is backed up by using RAID 6, a copy of the disc is kept in a separate machine and the data is also regularly backed up offsite

REDCap API

- External applications connect to REDCap remotely in a programmatic or automated fashion
- Vanderbilt continues development and refinement of REDCap

REDCap @ Wits

Contact the REDCap Administrator (<u>redcap.health@wits.ac.za</u>) if you have any questions, or for access to the Wits REDCap website
